

SampleQ: Laboratory automation and more

New: HSO Heated Syringe Oven

SampleQ has developed a new option for the RSH/RTC PAL-Autosampler that allows pre-heating of any syringe coming from the “tool changer unit”. This unique feature allows you to inject viscous samples or HT Simdist.

Benefits include:

- Temp range: 35° -120°C
- Standard syringes for Tool Changers module
- Easy software integration
- Can be used in combination with active Syringe wash.
